At A Glance

Quality Management Systems

This training is designed to provide participants with an understanding of the changes coming to ISO 9001:2026 and ISO 14001:2026 simultaneously.

For the first time, organizations managing both quality and environmental management systems are facing concurrent major revisions. ISO 9001:2026 and ISO 14001:2026 are part of a broader move toward unified, harmonized management system standards and the implications for certified organizations are significant.

Here's a breakdown of what to expect:

Core foundation: Both standards retain their existing frameworks while aligning more closely with each other and with current ISO requirements for management system standards.

Enhanced focus:

- **Dual transition:** Organizations certified to both standards face overlapping timelines and shared compliance obligations.
- **Harmonization:** New alignment between the two standards creates opportunities to streamline your integrated management system.
- **Competitive positioning:** Organizations that transition early avoid audit disruption and maintain certification standing.

Overall, this represents a pivotal moment for quality and environmental management professionals. The organizations that move now will be better positioned than those that wait.

By attending this one day training you'll learn how to navigate both transitions efficiently and ensure your organization stays ahead of the curve.

Who Should Attend

Quality Management Systems

This seminar is primarily designed for existing ISO 9001 and ISO 14001 certified organizations that will need to transition to the newly revised standards. This seminar will also benefit those who have conducted gap analysis and may need adjustments to help identify problem areas, senior managers, quality and environmental management professionals, and employees responsible for implementation or oversight of either system.

Seminar Summary

The revised standards signal a broader shift in how ISO approaches management system alignment. Changes are designed to:

- Serve organizations of any size or industry.
- Be recognized by accreditation bodies worldwide.
- Reduce redundancy for organizations running integrated management systems.

Changes address:

- Harmonization across quality and environmental management requirements
- Clarified requirements throughout both standards
- Emerging priorities shared across the ISO management system landscape
- Integration opportunities for organizations certified to both

Attendees successfully completing the examinations provided in conjunction with this course receive a Certificate of Completion from APEX Quality Assurance.
